Dear Customers,

As a consumer, you're always looking for ways to save money when it comes to your home and your monthly utility bills. Lawrenceburg Gas encourages you, if possible, to use a combination of electricity and natural gas in your home to save on future bills. Each form of energy has its own unique, cost-effective advantages.

For your lights, computer, TV, dishwasher, refrigerator, and countless other appliances you use every day, there is no substitute for electricity. But for heating, cooking and drying, natural gas is your most efficient option. Why?

- Natural gas appliances lower bills. Natural gas releases heat quickly and easily, while electric heating elements require a comparatively large amount of energy for a smaller amount of heat. Using natural gas for your stove, water heater, furnace, and dryer will save you money.
- Natural gas appliances are more efficient. Natural gas energy is transported from the well to your home, so there is no energy lost in conversion. Electricity is generated from fuel (natural gas, coal, or nuclear). Converting these fuels into electricity and then transmitting leads to a lot of lost energy. In short, gas is a better use of natural resources.
- Natural gas appliances are environmentally friendly. Natural gas is a cleaner fuel than coal and does not create toxic waste like nuclear power. Using electricity and natural gas together in your home is a smart choice for saving money and energy.

The Lawrenceburg Gas Company is pleased to offer a rebate program to customers who elect to upgrade their older natural gas fired appliances to more efficient models or who elect to purchase natural gas fired appliances to replace existing appliances powered by other sources of energy.

The number of rebates available is limited so this offer is on a first come first served basis. You may request a rebate for appliances bought on or after January 1, 2007 provided you are able to show an invoice for the appliance and proof of payment. To obtain a Rebate Request Form explaining the details of the offer please call the office at 812-537-1921.

Sincerely,

The Lawrenceburg Gas Company

### Rebate Amounts for Conversion from Alternative Fuels – Single Dwelling Residence

Natural Gas Equipment Installed:	# of Units	Rebate per Unit	Extension	Fuel Source Replaced (Elect, Fuel Oil, etc.)
Natural Gas Furnace (90% or higher – primary heat source) _____	_____	\$ 450	_____	_____
Natural Gas Furnace (90% or higher – second unit) _____	_____	\$ 200	_____	_____
Natural Gas Furnace (less than 90% - per unit) _____	_____	\$ 200	_____	_____
Natural Gas Water Heater _____	_____	\$ 250	_____	_____
Natural Gas Range (cook top / oven combined) _____	_____	\$ 175	_____	_____
Natural Gas Cook Top _____	_____	\$ 125	_____	_____
Natural Gas Oven _____	_____	\$ 125	_____	_____
Natural Gas Clothes Dryer _____	_____	\$ 200	_____	_____
Natural Gas Fireplace (not starter) _____	_____	\$ 50	_____	_____
Natural Gas Grill _____	_____	\$ 25	_____	_____
Pool Heater _____	_____	\$ 100	_____	_____

### Rebate Amounts for Gas-to-Gas High-Efficient Upgrade Single-Dwelling Residence

Natural Gas Furnace (90% or higher – primary heat source) _____	\$ 200	_____
Natural Gas Furnace (90% or higher – second unit) _____	\$ 100	_____
Natural Gas Water Heater (Electronic Ignition Required) _____	\$ 125	_____
Natural Gas Range (Electronic Ignition Required) _____	\$ 75	_____
Natural Gas Cook Top (Electronic Ignition Required) _____	\$ 50	_____
Natural Gas Oven (Electronic Ignition Required) _____	\$ 50	_____
Natural Gas Clothes Dryer _____	\$ 100	_____

Total Rebate \_\_\_\_\_ \$ \_\_\_\_\_

See Next Page for Eligibility Requirements

**ELIGIBILITY**

Eligibility for rebates is based on the installation of natural gas equipment in associations with new construction, replacement of equipment that uses an alternative energy source (e.g., electricity, fuel oil, wood, coal, etc.) in an existing structure, or an upgrade of existing natural gas appliances to high efficient (Energy Star rated) equipment.

Multi-dwelling and commercial application rebates available on Btu equivalent basis.

Gas-to-gas high efficient upgrades are subject to annual limitations. Rebates provided on a first come, first serve basis.

NATURAL GAS FURNACE installed in conjunction with an electric heat pump will be considered a secondary heat source and eligible for a \$200 rebate.

**BOILER WATER CIRCULATION UNIT**

Rebates for boiler units that circulate water for space and/or water heat will be determined on the Btu rating of the equipment.

**PROPANE CONVERSION**

If an existing gas furnace is converted from propane to natural gas, the rebate is based on the efficiency rating of the current unit. In the event you are converting an appliance from propane, the rebate is available for the conversion costs not to exceed the rebate amount per converted appliance listed on the first page.

Rebate program subject to discontinuance with no further notice.

**CUSTOMER ATTESTATION**

Under penalties of perjury, I represent that this Rebate Request Form complies with the eligibility requirements noted above. Customer agrees to allow utility personnel the ability to inspect equipment for which rebate is requested.
